1 — Problem

Can a colleague inspect this AI-assisted change?

A useful handoff needs enough evidence for another person to examine the actual change.

2 — Method

Keep the starting revision, changed artifact and check results together.

Record the starting code version, link the resulting artifact, and retain the checks run against that result.

Review applies to exact content. An edit needs a fresh review decision.

A review of one version cannot be assumed to approve later changes.

4 — Next step

Agree on one outcome and its acceptance check before starting.

Select a small task and decide what evidence would let a reviewer assess it.
