1 — Problem

SYNTHETIC EXAMPLE • PROPOSED EXERCISE

A reviewed draft changes. Does its old review still apply?

Consider a synthetic record whose checkpoint note changes after review.

2 — Method

SYNTHETIC EXAMPLE • PROPOSED EXERCISE

Save → review → edit checkpoint → reopen.

Proposed exercise.

Use isolated synthetic data to save a record, review it, change its checkpoint note and reopen its ledger. This exercise has not been run for this post.

SYNTHETIC EXAMPLE • PROPOSED EXERCISE

Expected: edited text retained; earlier review invalidated. No new result claimed.

The expected behavior is retention of the edit and a requirement for a fresh review. An actual run and receipt are still needed.

4 — Next step

SYNTHETIC EXAMPLE • PROPOSED EXERCISE

Run at an exact revision; retain the actual result.

Inspect the implementation, execute a meaningful check against a named version and retain its observed result before claiming success.
